SUMMARY

AI & Data Science graduate with a strong foundation in machine learning, data analysis, and Python programming. Experienced in building models (CNN, KNN), performing data preprocessing, and analyzing datasets using SQL and Python. Skilled in Pandas, NumPy, TensorFlow, and Scikit-learn to develop data-driven solutions and extract actionable insights.

SKILLS

Programming & Querying: SQL, Python, MySQL, Query Optimization, ETL, Problem Solving

Python Development: Python Application Development, Object-Oriented Programming, Exception Handling, File Handling

Machine Learning: Supervised Learning, TensorFlow Classification (CNN, KNN)

Analytics & Statistics: Data Cleaning, EDA, Descriptive Statistics, Forecasting Basics, Insight Generation, Performance Analysis, Trend Analysis

API & Integration: REST/API Concepts, ThingSpeak API

Tools : GitHub, Power BI, Excel

EXPERIENCE

Data Analytics Training

Pyspiders Institute

July 2025 – March 2026, Bengaluru, India

- Processed and consolidated **1,000,000+** rows of multi-regional data using Excel and SQL, improving weekly KPI accuracy by 22% and enabling consistent cross-geography business reporting.
- Designed reusable Excel templates with VLOOKUP logic and pivot structures, reducing **reporting time by 40%** across four business departments and improving documentation quality.
- Developed Power BI dashboards visualizing revenue trends and customer mix, increasing visibility of monthly patterns and enabling managers to generate **data-driven decisions 30% faster**.

PROJECTS

Poultry Disease Detection & Heat Stress Prediction System

Python | TensorFlow | Scikit-learn | OpenCV | ThingSpeak API | Tkinter

- Developed CNN model using TensorFlow for image-based disease classification
- Applied image preprocessing techniques including Blur, Edge Detection, resizing, and normalization
- Built KNN model using Scikit-learn to classify environmental sensor data
- Integrated real-time data using ThingSpeak API for live monitoring
- Designed Tkinter-based GUI for image upload and prediction
- Evaluated model performance using accuracy metrics and confusion matrix

Customer Churn Prediction using Machine Learning

- Built end-to-end ML pipeline to predict customer churn using Python and Scikit-learn
- Processed and analyzed customer dataset with feature engineering and encoding techniques
- Trained and evaluated multiple classification models (Logistic Regression, Random Forest, KNN)
- Achieved improved prediction performance through model comparison and tuning
- Derived business insights by identifying key churn drivers (tenure, pricing, contract type)
- Visualized data trends and model results using Matplotlib and Seaborn

Skincare product Recommendation System

- Evaluated skincare dataset to identify trends in ingredients, product ratings, and skin-type suitability
 - Performed data cleaning and EDA in Python, handling missing values and standardizing features
 - Wrote complex SQL queries using joins, aggregations, and filtering to extract business insights
 - Designed Power BI dashboard to visualize product trends, ratings, and ingredient insights.
-

CERTIFICATIONS

Data Analytics and Python Certificate

Infosys springboard • 2023 • Programming fundamentals using Python

Guvi (Naan Mudhalvan) • Neural Networks and Deep Learning

Pyspiders • 2026 • Completed Data Analytics involving SQL, Python, Power BI, Excel

EDUCATION

Jansons Institute Of Technology

B.tech – Artificial Intelligence and Data Science • 2025 • 7.6/10
